

Name:Samruddhi Sangram Yadav.

Roll No.: 560

Assignment NO. 1B

Write a JavaScript Program to get the user registration data and push to array/local storage with AJAX POST method and data list in new page.

Register.html

```
<!DOCTYPE html>

<html>

<head>

<title>Register</title>

<link rel="stylesheet" href="style.css">

</head>

<body>

<h2>User Registration</h2>

<form>

Name :

<input type="text" id="name" required><br><br>

Email :

<input type="email" id="email" required><br><br>

Password :

<input type="password" id="password" required><br><br>

<button type="submit" onclick="saveUser()">Register</button>

</form>

<br>

<!-- Display Button -->

<button onclick="displayUsers()">Display Users</button>

<h3>Stored Users :</h3>

<div id="result"></div>
```

```
<script src="script.js"></script>
```

```
</body>
```

```
</html>
```

Style.css

```
/* Page Style */
```

```
body{
```

```
font-family: Arial;
```

```
background-color:white;
```

```
text-align:center;
```

users.forEach(function(user){  
output +=  
"Name : "+user.name+  
" | Email : "+user.email+  
"<br>";  
});  
document.getElementById("result").innerHTML = output;  
}
```

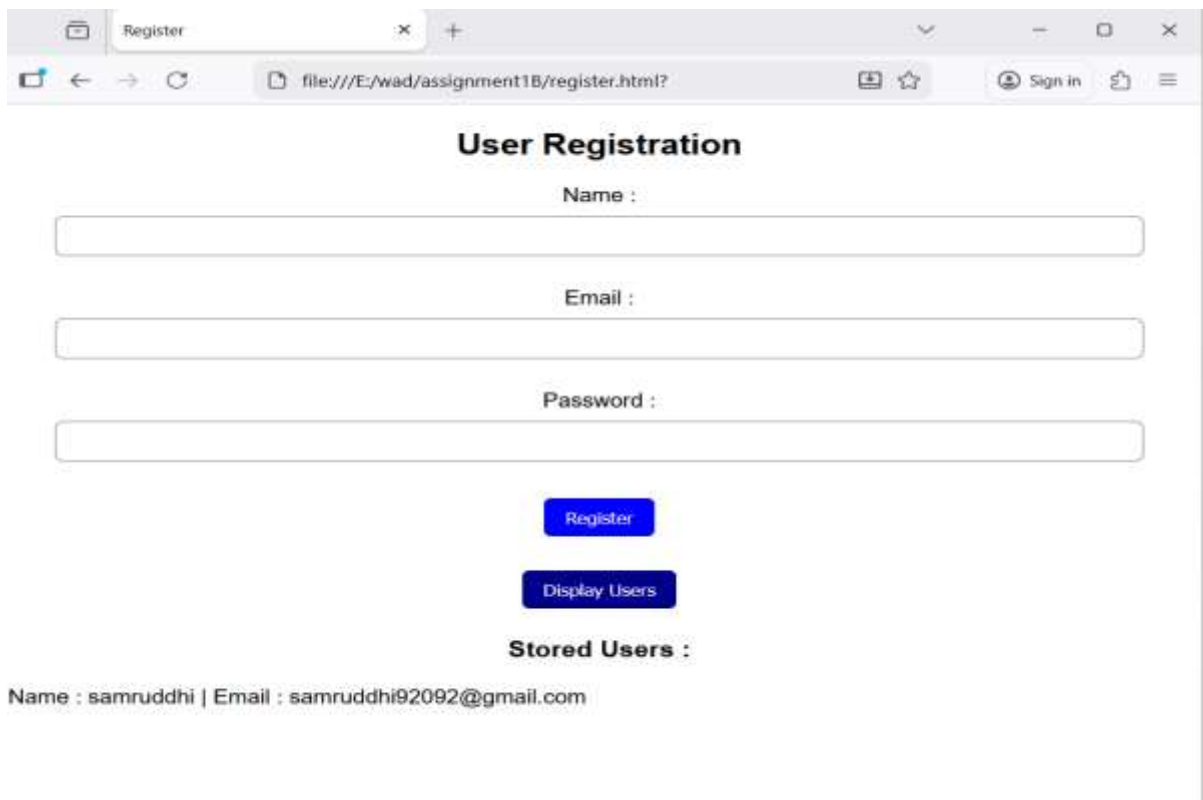

*****OUTPUT*****

Home page

A screenshot of a web browser displaying a "User Registration" form. The browser's address bar shows the file path "file:///E:/wad/assignment1B/register.html". The form has three input fields: "Name :" with the value "samruddhi", "Email :" with the value "samruddhi92092@gmail.com", and "Password :" with masked characters "*****". Below the fields are two blue buttons: "Register" and "Display Users". At the bottom, the text "Stored Users :" is visible.

Display store data

A screenshot of the same "User Registration" form, but now it displays the stored user data. The input fields are empty. Below the "Display Users" button, the text "Stored Users :" is followed by the user information: "Name : samruddhi | Email : samruddhi92092@gmail.com".

Local Storage data
